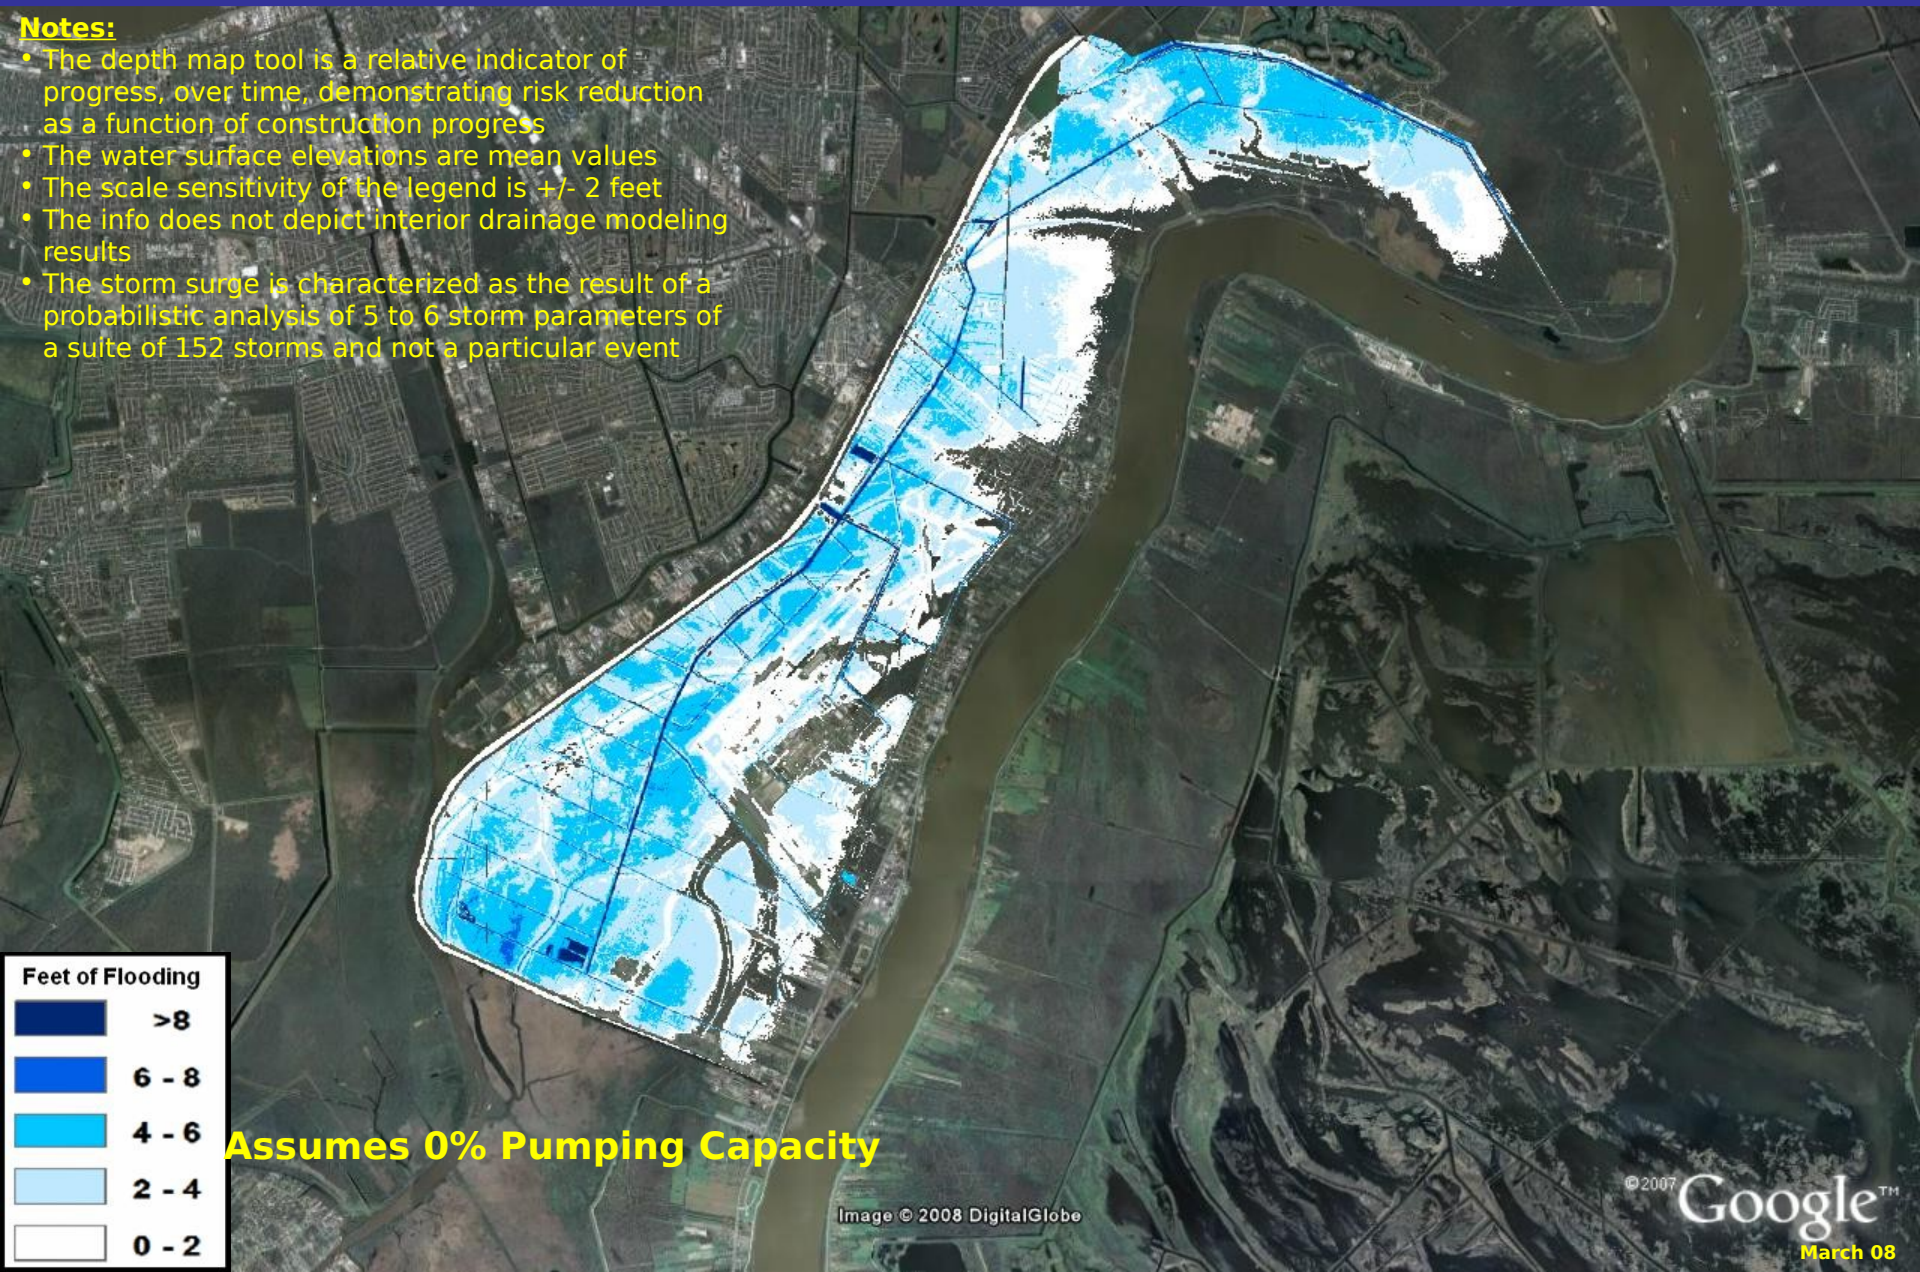
These slides demonstrate the effects of the changes in pumping capacity.

Before Katrina, you had a 1% chance every year of flooding this deep from Hurricanes



Notes:
• The depth map tool is a relative indicator of progress, over time, demonstrating risk reduction as a function of construction progress
• The water surface elevations are mean values
• The scale sensitivity of the legend is +/- 2 feet
• The info does not depict interior drainage modeling results
• The storm surge is characterized as the result of a probabilistic analysis of 5 to 6 storm parameters of a suite of 152 storms and not a particular event
